# dc-serverlogs

```
This is example how to use dc-serverlogs
```

### **Discord**

How to create webhooks Discord

## **Create Webhooks**

```
1. Login Discord
```

2. Select Setting ( )

3. Select Intergrations

4. Click on the Webhooks

# Config

About the config.lua

## License Key

This is License Key where you get when you buy our scrirpts

## Config['license\_key'] = 'Key'

Image

This is discord image Config['webhook\_image'] = 'https://i.imgur.com/GxQpZzJ.png'

## Color

Note You can use imgur.com

## Color is the color bar of the text boxes displayed within the Discord box

#### Config['color'] = {

['^0'] = 16777215, -- White #ffffff  $['^1] = 16729156,$ -- Light Red #ff4444  $['^2] = 10079232,$ -- Strong Green #99cc00  $['^3'] = 16759603,$ -- Vivid Orange #ffbb33 -- Strong Blue #0099cc  $['^4'] = 39372,$  $['^5'] = 3388901,$ -- Bright Blue #33b5e5  $['^6'] = 11167436,$ -- Moderate Violet #aa66cc  $['^7] = 10070709,$ -- Grayish Blue #99aab5 ['^8'] = 13369344, -- Strong Red #cc0000 ['^9'] = 13369448 -- Strong Pink #cc0068

## You can get the color from here converting colors.com

Note

Webhook is the name of the Event and you can click the Webhook to send message to the designated room

#### Config['webhook'] = { ['Login'] = 'Webhook URL - Login',

Webhook

['Logout'] = 'Webhook URL - Logout', ['Chat'] = 'Webhook URL - Chat',

# Note

• Login Name of Webhook Event

['Dead'] = 'Webhook URL - Dead'

## • Webhook URL URL of Webhook

**Warning** 

Installation

Install dc-serverlogs to receive events from other resources.

The last line must be without a , as this may cause the Error resource to be displayed.

Server

Add code to receive events from resources. Code:

local sendToDiscord = 'This is message send to discord'

• **EventName** The name of the Webhook Event that is set in config.lua

### TriggerEvent('moon\_discordlogs:sendToDiscord', 'EventName', sendToDiscord, source, '^1')

Note

• sendToDiscord local Massage You want to send to the Discord box .source Information of the player on the server side

• 1 Text box color bar Colors can be viewed in Config.lua

#### Example of adding a log Usage Item:

Resource: es\_extended/server/main.lua line 439 Search Code

#### AddEventHandler('esx:useItem', function(itemName) local xPlayer = ESX.GetPlayerFromId(source)

RegisterNetEvent('esx:useItem')

local count = xPlayer.getInventoryItem(itemName).count

ESX.UseItem(source, itemName)

#### xPlayer.showNotification(\_U('act\_imp'))

```
end
end)
Repalce Code
RegisterNetEvent('esx:useItem')
AddEventHandler('esx:useItem', function(itemName)
    local xPlayer = ESX.GetPlayerFromId(source)
    local count = xPlayer.getInventoryItem(itemName).count
        ESX.UseItem(source, itemName)
```

# TriggerEvent('azael\_discordlogs:sendToDiscord', '', sendToDiscord, source, '^3')

Config['webhook'] = {

['Dead'] = 'Webhook URL - Dead'

['Login'] = 'Webhook URL - Login', ['Logout'] = 'Webhook URL - Logout',

Add code to receive events from resources. Client

local sendToDiscord = 'This message will send to discord'

• GetPlayerServerId(PlayerId()) Client information

• 1 Text box color bar Colors can be viewed in Config.lua.

ESX.ShowNotification(\_U('impound\_successful'))

ESX.ShowNotification(\_U('impound\_successful'))

```
xPlayer.showNotification(_U('act_imp'))
    end end)
Example of adding a Webhook Event
Resource: dc-serverlogs/config.lua line 43
Config['webhook'] = {
    ['Login'] = 'Webhook URL - Login',
    ['Logout'] = 'Webhook URL - Logout',
    ['Chat'] = 'Webhook URL - Chat',
```

local sendToDiscord = 'Player' .. xPlayer.name .. ' Use ' .. count ..''.. ESX.GetItemLabel(itemName) .. ' '

```
['Chat'] = 'Webhook URL - Chat',
 ['Dead'] = 'Webhook URL - Dead',
 ['UseItem'] = 'Webhook URL - Use Item'
Warning
The last line must be without a , as this may cause the Error resource to be displayed.
```

# TriggerServerEvent('azael\_discordlogs:sendToDiscord', 'EventName', sendToDiscord, GetPlayerServerId(PlayerId()), '^1')

Find Code

Client

Note • EventName The name of the Webhook Event that is set in config.lua • **sendToDiscord** local Massage You want to send to the Discord box.

#### **Example of adding a log Send the car to Pound:** Resource: esx\_policejob/client/main.lua line1555

#### Repalce Code function ImpoundVehicle(vehicle) local plate = GetVehicleNumberPlateText(vehicle)

function ImpoundVehicle(vehicle)

currentTask.busy = false

ESX.Game.DeleteVehicle(vehicle)

ESX.Game.DeleteVehicle(vehicle)

**Example of adding a Webhook Event** 

Resource: dc-serverlogs/config.lua

currentTask.busy = false local sendToDiscord = 'Player' .. GetPlayerName(PlayerId()) .. ' Send a registed vehicle ' .. plate .. ' To Pound' TriggerServerEvent('moon\_discordlogs:sendToDiscord', 'PoliceImpound', sendToDiscord, GetPlayerServerId(PlayerId()), '^5
